PROJECTS

Aqaba (current): github.com/RivaD2/aqaba

A React app that is a complete revamp of the Aqaba perfume site

- Solidifying knowledge of React Class-based components, Function components, and code reusability
- Improving understanding of state management, props, component hierarchy and event handling
- Implements modals and a carousel using various libraries like React Spring and Material-UI

Book Project, Open Source (current): github.com/Project-Books/book-project

- Created reusable React components while gaining familiarity with TypeScript syntax
- Responsible for adding Material-UI input adornments to toggle showing and hiding password
- Added Material-UI Switch component to navigation that enables toggling "Dark Mode"

Greener, December 2020: github.com/RivaD2/GreenerFrontEnd

A React-Native app to help users relax by caring for virtual plants

- Responsible for client-side OAuth Login page and server-side route for authenticating users
- Implemented client-side methods to request OAuth credentials and redeem for token verification

Project Pinstrat, October 2020: github.com/RivaD2/project-pinstrat

Backend server and database interface for Pinstrat (our client), with encrypted request data and filtered results

- Took on role of PM to manage client requirements and deliverables
 - Worked with the client to implement encryption and decryption of data using Bcrypt
 - Built out Mongoose Schema and Model based off existing complex JSON models
-
